POSS[®] for Propulsion & Beyond

High-Performance Nanostructured Polymers

- High temperature case and motor insulation for solid rockets
- Plastic tubing and ducting for liquid rockets engines
- Space-survivable materials and coatings
- High-temperature canopies and hybrid lubricants

POSS Nanotechnology Offers Versatility!

Solid Rocket Motor Insulation Program

Case Insulation

POSS-Insulation

Why POSS?

- need inorganic material with polymer flexibility
- ability to incorporate very high loadings
- processable using traditional equipment!!
- maintain mechanical property range
- physical cross-linker for TPEs

POSS for Ablative Materials

Traditional Polymer

POSS Polymer

The Silicon to Oxygen ratio of 1:1.5 may be the key!!!

Liquid Rocket Engines

Crucial for Reducing Weight and Cost

Engine Ducting

*Polymer Tube/Case Hot Gas Burst
Tester*

Why POSS?

- need to improve thermal & mechanical properties of SOTA polymers (PC, PPS, TPI, PEEK, PEI)
- Cornucopia of monomers for copolymerization reactions
- NO CTE mismatch (cryogenic capability)
- Potential for extrusion!

POSS Materials for Aerospace

High Temperature

Hybrid Lubricant Applications

Why POSS?

- POSS based lubricants $T_{dec} = 590\text{ }^{\circ}\text{F}$
- Cornucopia of monomers for compatibility and viscosity control

Generation III Lubes

CyT₂ Class

When R=Decyl the viscosity at -40°F is 4000 cP
When R=Dodecyl, the freezing point is 10°F
Chemical and Physical Blending Studies Show that POSS follows the Rule of Mixtures
Joint Patent with Hybrid Plastics filed this year

Dual Use S&T: WMR

Jet Canopies

POSS-based Transparent Materials

- Mach 2x speeds limited for plastic canopy (need increased HDT)
- Target Engagement Times can be reduced by increasing flight speed

Why POSS?

POSS-PMMA increases use temp. up to 150 °C
POSS can be optically transparent!!
POSS-PMMA readily processed via foaming
Ability to make POSS-polycarbonates also

WMR's Current High
Performance Foam

Cell Sizes can be Tailored
From Nano To Several mm

POSS Materials for Space

Critical for Increasing Lifetime

Satellites & Space Systems

POSS Nanocomposite Payoffs

- Maximum Space Survivability
 - LEO, AO, VUV, Impact
- Lower Density 'Filler'
- High Modulus
- Resins for all Structural Applications

Simulated 3 mo. AO/VUV Exposure

- 9-20x greater AO resistance than current state of art
- Even better AO/VUV resistance
- Current NASA, Aerospace Corp., and University collaborations

POSS-PDMS copolymers

Where Are We Now?

Research:

New Monomers & Feedstocks (>180) - simplicity
Control & Prediction of Property Enhancements

Production:

Multi-Ton Production Capability!!

10-100x Reduction in Cost (monomer dependent)!!!

Application:

Critical & High-Risk Paths for Air Force Applications

(Insulation, Ducting, Lubricants, Space Materials)

Incorporation and R&D Testing by Numerous Companies

POSS™-Technology Timeline

Chemistry

Polymers

Commercial Solutions

Technology Transfer

Plant-level production

ATP Funded Cost Reduction

Crystalline Solids

Wide melting range 24°C to 400°C+

Waxes

Wide viscosity range 40cSt. to 400cSt

Liquids & Oils

Summary

The Air Force is heavily invested in POSS Applications Research and Development

Currently one application is being 'flight-tested' for a technology transition

New applications are being investigated (e.g., batteries, capacitors, radomes)

The technology transfer to Hybrid Plastics **IS** a success story with significant volume increase and price reduction

POSS Nanotechnology Offers Versatility!!
